

FTP using FireFTP for FireFox on Mac

These instructions assume the user has FireFox 4 and up installed.

1. Go to <http://fireftp.mozdev.org/>
2. Click on Download FireFTP
3. A drop down window will show up next to your address bar on the leftmost corner with a warning similar to Figure 1

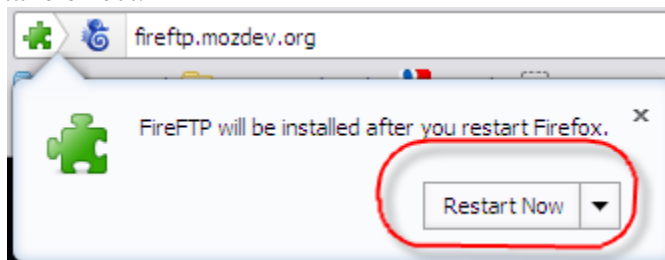

4. Click on Allow
5. When the Software Installation dialogue box pops open, wait until the “Install Now” button become active

6. Click on Install Now

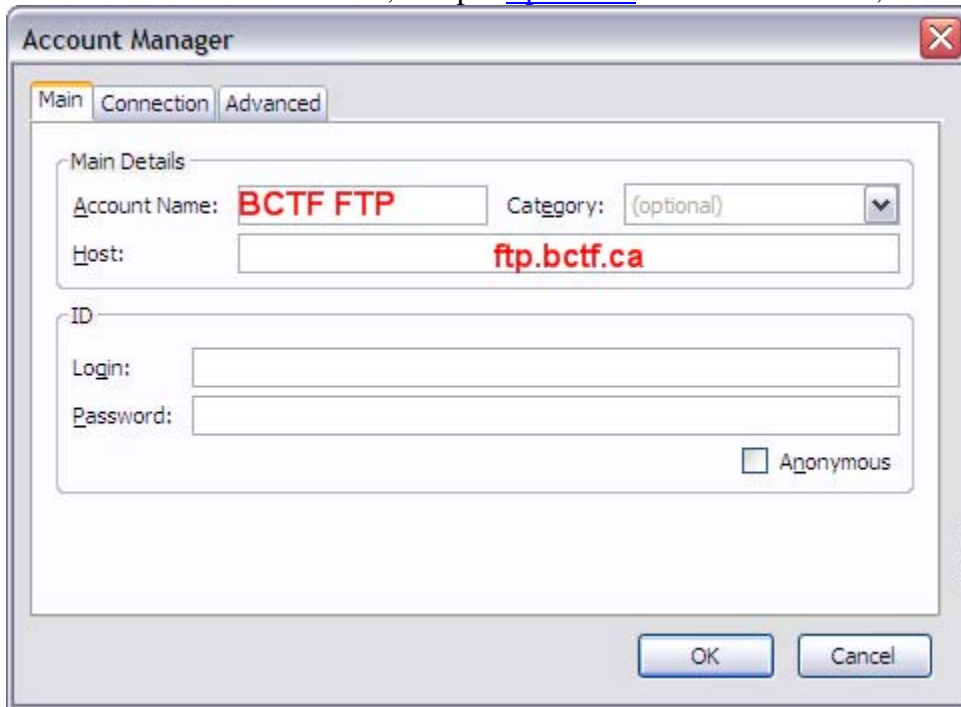

7. When installation is finished, click on Restart Now to restart FireFox for the changes to take effect.

8. Once FireFox is restarted, right click anywhere beside the tabs and select Customize...
9. Drag and drop the FireFTP button anywhere you desire next to the tabs
10. Click on the blue sea horse button 
11. Click on Create an account

12. Give this new account a name, and put ftp.bctf.ca into the Host field, and click OK

13. Click on Connect

14. Click on Uploads > Strike2012

15. Drag your photos from any Finder window into the rightmost plane
